

**About us:**

DHV TECHNOLOGY designs and manufactures Power Supply Systems for satellites. Starting in 2014, DHV delivered the first hardware units in this year and has been since then, commercializing products for worldwide customers such as satellite integrators and companies of the space sector. As for today, we have developed more than 100 projects and have a large flight heritage.

Based in Málaga, south of Spain, the DHV Team has a wide range of specialties and skills including aerospace, mechanical, materials and electronics engineering.

As the company is growing, we are looking for a JUNIOR MECHANICAL ENGINEER for our Mechanical Department, who will participate in challenging tasks developing satellite power sub-systems.

What you will do:

- Design of mechanical systems.
- Generation of 2D manufacturing and assembly drawings.
- Creation of design documentation, test procedures and manufacturing instructions.
- Structural analysis.
- Interpretation of results and evaluation of the design, providing proposals for improvement and optimization.
- Evaluation and selection of materials.
- Search and selection of suppliers.
- Generation of reports.
- Participate in qualification tests.

What we expect from you:

- Mechanical or Aerospace Degree.
- English, fluent level written and spoken.

Knowledge is valued in:

- Solid Works (or similar).
- Experience in structural analysis (FEMAP software or similar).
- Knowledge of metallic and composite materials.
- Experience in the Space Sector.
- Familiarization with ECSS standards and methodologies.

What we offer:

- Join a multidisciplinary and highly qualified team.
- Technological and innovative projects at an international level.
- Professional career development.
- Starting immediately.
- Full time employment.
- Position based in the beautiful Málaga city.

If you feel identified, we are waiting for you. You can send your resume to this email:
